MEETING AGENDA: PROJECT COORDINATION & FEATURE DEVELOPMENT

1. PROJECT MANAGEMENT

TASK ASSIGNMENT:

Clearly assign tasks to team members.

Ensure everyone knows their responsibilities—no overlaps, no confusion.

PRIORITIZATION:

Focus on musthave features first (MVP).

Prioritize features and tasks based on importance and urgency.

DEADLINES & MILESTONES:

Set specific deadlines for each task and feature.

Break the roadmap into weekly/monthly sprints with defined deliverables.

2. DEVELOPMENT WORKFLOW

CODE QUALITY & STANDARDS:

Establish and enforce coding standards (using tools like Prettier/ESLint).

Use proper Git branching and conduct regular code reviews for maintainability and scalability.

TESTING & QA:

Integrate unit testing and automated testing for critical flows.

Plan for manual QA sessions to ensure the platform meets required standards.

3. DESIGN & USER EXPERIENCE

DESIGN REVIEW:

Finalize UI mockups and ensure they align with the project's objectives and brand.

USER EXPERIENCE:

Walkthrough UX flows to identify and reduce friction points.

Ensure the platform is intuitive and userfriendly.

ACCESSIBILITY:

Apply accessibility standards (WCAG) such as proper color contrast, keyboard navigation, and screen reader support.

4. TEAM COMMUNICATION & COLLABORATION

COMMUNICATION CHANNELS:

Use daily communication tools like Slack or Discord.

Reserve Zoom (or similar platforms) for indepth discussions.

COLLABORATION TOOLS:

Utilize tools like Trello or Asana to track progress, assign tasks, and manage deadlines.

REGULAR UPDATES:

Hold daily standups or biweekly checkins.

Maintain transparency on progress and issues.

5. CORE PLATFORM FEATURES

COURSE CREATION:

Develop functionality for course creation, including adding/editing lessons, media, and quizzes.

STUDENT DASHBOARD:

Create a dashboard for students to track their progress, assignments, deadlines, and notifications.

6. ESSENTIAL LEARNING FEATURES

QUIZZES & ASSESSMENTS:

Implement timed quizzes with various question formats (multiple choice, codebased questions, etc.).

GRADING & FEEDBACK:

Develop both automated and manual grading systems.

Provide detailed feedback per question to help students understand their performance.

BASIC ANALYTICS:

Track user engagement, course completion rates, and quiz performance to gauge the effectiveness of the learning platform.
