

ATLAS Development Roadmap

Overview

ATLAS is an innovative EdTech platform designed to enhance learning experiences in Cameroon. This roadmap outlines the development plan for a fully functional platform within one month.

Team Structure

- **Frontend Developers (2):** Responsible for UI implementation and integration.
- **Backend Developers (2 + 1 Full Stack):** Handle API development, database, and authentication.
- **Designer (1):** Creating UI/UX components (starting soon).

Development Plan (4 Weeks)

Week 1: Foundation Setup & Initial Designs

- **Day 1-2:** Set up repositories, environment configuration, and project structure.
- **Day 3-5:** Designer starts UI/UX mockups; Backend team sets up authentication & database schema.
- **Day 6-7:** Implement authentication system (signup, login, password reset) & basic UI layout.

Week 2: Core Features Development

- **Day 8-10:** Develop student & teacher dashboards (frontend), role-based access control (backend).
- **Day 11-12:** Implement interactive quizzes & instant feedback system.
- **Day 13-14:** Integrate leaderboard & performance tracking.

Week 3: Advanced Features & Testing

- **Day 15-16:** Content management for teachers (upload notes, create quizzes).
- **Day 17-18:** Implement personalized learning recommendations.
- **Day 19-20:** Complete analytics dashboards (student progress tracking).

Week 4: Optimization & Deployment

- **Day 21-23:** UI refinements, bug fixes, performance optimization.
- **Day 24-25:** Documentation (API, frontend, setup guides).

- **Day 26-27:** Deployment on cloud platform (e.g., AWS, Vercel).
- **Day 28:** Final testing & project review.

Documentation Plan

- **API Documentation:** Endpoints, request/response formats.
- **Frontend Documentation:** Component structure, state management.
- **Setup Guide:** Instructions to run the project locally and in production.

Future Improvements

- Mobile app version (React Native/Flutter).
- AI-powered tutoring system.
- Offline mode for students in low-connectivity areas.
